

Osteoma Cutis is a benign tumor of the skin, usually found on the scalp. It is a type of osteoma, which is a benign tumor of bone. The tumor is composed of mature bone tissue and is often associated with a cystic space. It is typically found in the dermis or subcutis of the scalp. The tumor is usually asymptomatic and is often discovered incidentally during a routine physical examination. It is most commonly found in the frontal region of the scalp. The tumor is usually a single, well-circumscribed, dome-shaped nodule. It is often associated with a cystic space. The tumor is usually asymptomatic and is often discovered incidentally during a routine physical examination. It is most commonly found in the frontal region of the scalp. The tumor is usually a single, well-circumscribed, dome-shaped nodule. It is often associated with a cystic space.
