Parapsoriasis
There are three entities described as parapsoriasis: small-plaque parapsoriasis, large-plaque parapsoriasis, and parapsoriasis variegata.

Large-plaque parapsoriasis and parapsoriasis variegata are best considered as early stages of cutaneous T-cell lymphoma/mycosis fungoides.
Guttate dermatosis parapsoriasis

The small-plaque parapsoriasis, also known as xanthoerythrodermia perstans of Crocker,
Guttate dermatosis parapsoriasis

Histopathology

The small-plaque parapsoriasis shows focal epidermal involvement consisting of...
Pathogenesis. The inflammatory infiltrate in small-plaque parapsoriasis is dominated by CD4+ (helper-inducer) T lymphocytes with a small proportion of CD8+ (cytotoxic-suppressor) T lymphocytes subset. Langerhans cells are increased in the epidermis and dermis.
Relationship to Lymphoma

Although it is generally accepted that small-plaque parapsoriasis, or digitate derma...
but conversion into a systemic lymphoma does not occur. However, some believe that small-plaque parapsoriasis
